ADHESION FORM FOR MUNICIPALITIES

The main objective of the project is to promote energy planning at local level by sharing a common methodology among participating Partners (PP). This is essential to tackle Climate Change (CC), as energy use is mainly responsible for it. Local Authorities (LA) have a key role in this mitigation process, but as generally acquired, mitigation is not sufficient since CC is already taking place. The two options approach (mitigation and adaptation) in the energy planning process, are thus, essential. Following this principle an ad hoc methodology for drafting Sustainable Energy Action Plans (SEAP) in Alpine Space Area (ASA) will be created, promoted and implemented. PPs will improve their own skills thanks to a capacity building process improving their effectiveness in supporting LA. Furthermore one Action Plan for Public Investments methodology based on the requirement of art 5 of Directive 2012/27/EU will be available for ASA and several of these Action Plans will be drafted as pilot actions.

I, **Dott. Talon Giorgio**, Mayor of **Eraclea**, hereby confirm our interest in the co-operation with the SEAP_Alps project. This means that we will participate in the co-operation platform and in the action plan development on our territory and that we will help to select key stakeholders and to organise meetings. We also confirm that we are interested to implement the results and products of SEAP_Alps project in order to enhance our action plan to integrate mitigation and adaptation measures on our territory.
